DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-10 and 17-19, drawn to an on-board circuitry automotive pyrotechnic initiator and mating connector assembly, classified in class 102, subclass 202.14.
- II. Claims 11-16, drawn to a mating connector assembly, classified in class 439, subclass 180.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because of the combination as set forth in claim 17, which does not require all of the particulars of the subcombination as claimed for patentability. The subcombination has separate utility such as a light bulb socket.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Henry A. Blackner whose telephone number is 703-305-4799. The examiner can normally be reached on 08:45 - 17:15.
